**ABSTRACT:** The nations & regions GDP (gross domestic product) will represent their comprehensive strength in views of economy level and quality, so searching it may have an important effectiveness for us to process statistic with the national producing amount every month, season and year. In the meantime, the value with y-y has also a significant meaning that reflects the economy growth step because we should clarify the increasing change so as to evaluate the increasement and declination value preciously. The positive y-y value may mean the good and rapid economy developing status whilst the minus one may state the bad and slow economy step. So we judge the economy developing enhancement and decreasement through that y-y value for a certain period. Meantime, the toughness of national economy developing force will be shown by the y-y value because some regions remained a low economy situation but its y-y value had high one explained the high toughness with such regions besides the low GDP value. So that the new-quality productivity will be sought by us continuously special by those scientist, senior engineer, experts because they can lead to new feasible energy and dynamic force to drive the new one into

realizing new-quality productivity producing a certain effectiveness to GDP enhancement as last. In the meantime, the new-high-technology product will be formed accordingly that can create the industrial chains to support the high-knowledge skill transformed into the more comprehensive and complicated product for the sake of serving our citizen with modernization. The emerging technology would be driven the new energy force that includes the low -carbon and low-contamination electricity generator which may form the new quality productivity protected our earth from carbon-oxide and nitric-oxide etc. release. So that some the high-tech products would aware that the transformation and positively prepare the futural product producing and application. Thereby, the nations GDP will reflect the whole economy special in new high-tech-field maker and products will play a significant influence on that value increasement and control the y-y value under our consideration.

## 1. Introduction

The nations & regions GDP (gross domestic product) will represent their comprehensive strength in views of economy level and quality, so searching it may have an important effectiveness for us to process statistic with the national producing amount every month, season and year. In the meantime, the value with y-y has also a significant meaning that reflects the economy growth step because we should clarify the increasing change so as to evaluate the increasement and declination value preciously. The positive y-y value may mean the good and rapid economy developing status whilst the minus one may state the bad and slow economy step. So we judge the economy developing enhancement and decreasement through that y-y value for a certain period. Thereby, the detail discussion will include in the following aspects. The GDP which indicates national economic status has provided an important role in every aspect in the world. So that the population increasing rate would be maintained for the sake of raising high-technique product with the entire industrial chain constantly which might enhance our new-quality-productivity. Hence we should consider the effective factors for example the population quantity, new

quality productivity with high-technique etc. like big plane electric vehicle battery AI robot quantum computer medicine making disease diagnosis AI (artificial intelligence) ocean source space exploration nuclear generator etc. other ones. Low population is enable to offer high life & quality with improving GDP per capita value. Meanwhile, it can enhance the national whole GDP value and help us to boost the economic recovery and many things to do. So the certain population is about to improve our national confidence some degree and make us to become priority one as early as possible even the super-country to lead the world to leadership right.

In contrast, the GDP increasing rate may play a significant role with regulating population increasing rate mutually and cooperatively. Hence the two aspects may be emphasized and paid attention to in thriving the whole national economic developed degree through enough wielding our generations positively and efficiently by our government institution endeavor and evaluation. For the sake of making relevant policies and allocating capital into the necessary industries the corresponding strategic plan needs to be made under various background and entities. Then the according monitor and estimation will be followed and estimated periodically and frequently by the observer in government's institution. At last as to the developed speed in one nation the corresponding population increasing quantity and high-technique product producing will be discussed and considered more preciously and correctly according to the near past years experience and variation.

Therefore, the high-technique products will be completed through wielding our scientist & senior Engineers coordination tightly for the sake of reviving the industrial and tertiary modernization. We should constantly look for and seek the new quality productivity sustainably so as to take place of our traditional industry becoming modernity. An innovation industry like new energy electric generator will be in front of our path forwards, so that the corresponding tactic must be put up and seek the opportunity and fortune in order to burden our responsibility quickly and not to forget recommend the fitting one to appoint new occupation. Like the Bole identified horse or Maosui self-recommended the recommendation will be represent one aspect for our human resource department to consider and evaluate the recommended included a full research room with a set of computer high-technique

instrument & device, subordinate, subsidiary staff, salary, house, welfare etc. a series of work so as to appoint his new occupation reasonably and willingly. [1~24]

## 2. Discussions

### 2.1 The China & European industrial production analysis

The China & European industrial production would show 190 & 1,980 billion dollars by China & European Union accordingly in terms of Figure 1 in 1992 explained the European developed industry level. The y-y value would indicate 17% & 1.6% exhibited the China most forwards step then.

Figure 1 The China & European industrial production analysis [1]

Furthermore, the China & European industrial production would show 250 & 1,900 billion dollars by China & European Union accordingly in terms of Figure 2 in 1994 explained the European developed industry level. The y-y value would indicate 27.5% & -1.5% exhibited the China most forwards step then whilst the European Union remained minus step.

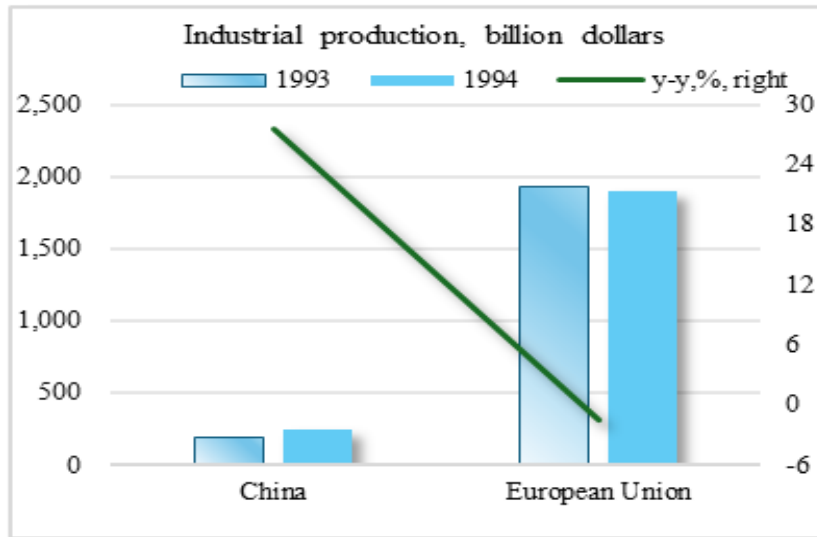

Figure 2 The China & European industrial production analysis I [1]

At the end, the China & European industrial production would show 2,690 & 3310 billion dollars by China & European Union accordingly in terms of Figure 3 in 2010 explained their highly developed industry level. The y-y value would indicate 17% & -3.6% exhibited the China most forwards step then whilst the European remained the minus step.

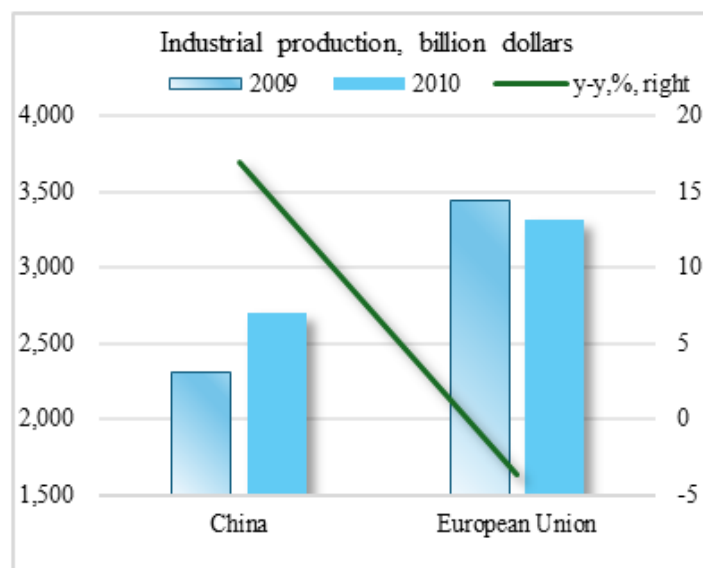

Figure 3 The China & European industrial production analysis II [1]

## 2.2 The 2026 latest nature index ranking with Chinese universities

The 2026 latest Nature index ranking Chinese top ten universities would show 3,290~1,817 papers by University of Science & Technology of China~Zhongshan University accordingly exhibited Zhejiang University Peking University University

of Chinese Academy of Science occupy the No. 2, 3, 4 position following the University of Science & Technology of China in Figure 4. Moreover, the Nature Index will release the result through Springer Nature in order to trace each research institution's researchers in 145 journals independent evaluation contributing to selecting high-quality nature & science & sanitary science's research paper within December 2024 and .November 2025.

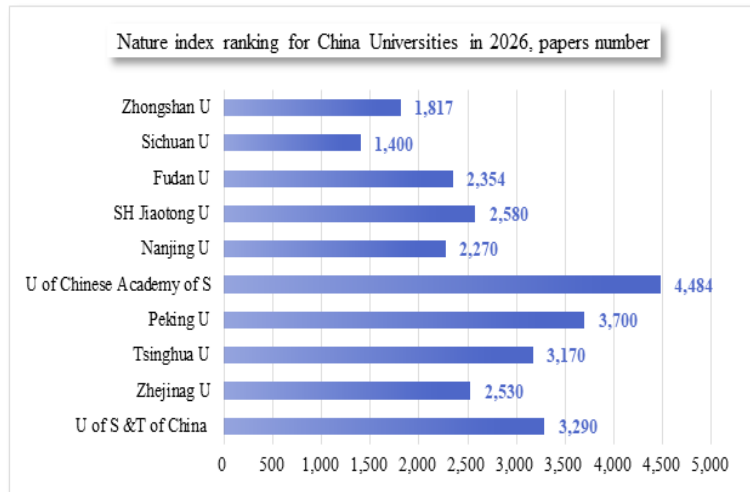

Figure 4 The 2026 latest Nature index ranking top ten Chinese universities [2]

At the same time, the 2026 latest Nature index ranking Chinese top 11~20 universities would show 1,120~980 papers by Jilin University~Suzhou University accordingly exhibited Huazhong University of Science & Technology Nankai University Shandong University occupy the No. 12, 13, 14 position following the Jilin University in Figure 5.

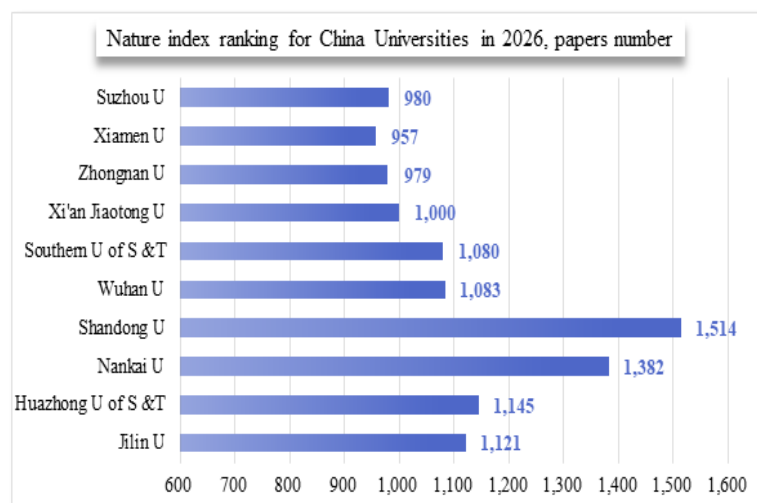

Figure 5 The 2026 latest Nature index ranking top eleven~twenty Chinese universities [2]

Summarily, the one nation & region's GDP & industrial production will reflect that region economy development degree through increasing that value includes agriculture industry tertiary three fields. So that industry & service industries will promote the whole GDP value continuously, special in service one having a significant growth momentum due to digital transformation and rising consumer demand, thereby reshaping employment structures and driving innovation across sectors. This shift is particularly evident in China's new construction for enhancing its innovation stimulus policies and capital support special in the service AI robot that may bring out new sale tendency in the future like autonomous payment and cinema ticket print machine. That largely declines the time for payment and ticket print in super mall & cinemas. Thereby, the detail GDP value is going to be discussed as above parts through comparing the various regions for the sake of enhancing corresponding tactic in next year and futural several years.

Summarily, the enhancing GDP behaviors will be meaning regulating the one for matching new dynamic balance according to exhibiting new tendency like War, disease and political fringe conflict which affect our life for a certain economic developing degree. So that the judgement may be according to the met actual situation making a corresponding method like increasing & decreasing this year or next one anticipating value so as to alleviate the nation burdens. Thereby, the fitting value may be satisfying the domestic consumption demands in order to rise up the positive consumption that will help us to go through the difficult situation when the risk happen. On the other side, the foreign trade will be encouraged so that the exportation win the importation for the sake of acquiring corresponding foreign reservation that is to be essential in critical period like when we buy some necessary goods abroad like military and defence weapon and equipment when we meet difficulty. Presently the high-technique product like drones and low air economy demands us to wield more powerful role in delivering the package and taking-out brisker and quicker that enable form the automatic and artificial intelligence service in big cities completed by robots from the reserve-box to each floor offices directly. So we look at the convenience and security. We should continuously to search for the new automatic & artificial intelligence robot work function special in the humanoid ones.

### 3. Conclusions

The nations & regions GDP (gross domestic product) will represent their comprehensive strength in views of economy level and quality, so searching it may have an important effectiveness for us to process statistic with the national producing amount every month, season and year. In the meantime, the value with y-y has also a significant meaning that reflects the economy growth step because we should clarify the increasing change so as to evaluate the increasement and declination value preciously. The positive y-y value may mean the good and rapid economy developing status whilst the minus one may state the bad and slow economy step. So we judge the economy developing enhancement and decreasement through that y-y value for a certain period. Meantime, the toughness of national economy developing force will be shown by the y-y value because some regions remained a low economy situation but its y-y value had high one explained the high toughness with such regions besides the low GDP value. So that the new-quality productivity will be sought by us continuously special by those scientist, senior engineer, experts because they can lead to new feasible energy and dynamic force to drive the new one into realizing new-quality productivity producing a certain effectiveness to GDP enhancement as last. In the meantime, the new-high-technology product will be formed accordingly that can create the industrial chains to support the high-knowledge skill transformed into the more comprehensive and complicated product for the sake of serving our citizen with modernization. The emerging technology would be driven the new energy force that includes the low -carbon and low-contamination electricity generator which may form the new quality productivity protected our earth from carbon-oxide and nitric-oxide etc. release. So that some the high-tech products would aware that the transformation and positively prepare the futural product producing and application. Thereby, the nations GDP will reflect the whole economy special in new high-tech-field maker and products will play a significant influence on that value increasement and control the y-y value under our consideration.
