ABSTRACT: The GDP (gross domestic product) is to be enhanced by us due to promoting its usefulness in our many aspects like expenditure incoming and leisure entertainment depended on our individual interesting that may increase our happiness and healthy curing & caring bad status like in hospital if we get catch cold etc. Therefore, we need to earn money from our working occupation continuously like company school & investment where the salary per month is obtained by us so as to maintain our daily and heavily expense. We should accept the entertainment influence to our mood control with calming down so we often go to restaurant and hotel to spend leisure time to our bodies due to its recovering our body & heart even the spiritual health. Therefore, we need more money to live advanced one place to pass our leisure time with clean room and good cuisine besides retaining good sleep after watching fashion clothes too. The expenditure may bring up new tendency that helps us to fill up the normal and positive mood to work then due to obtaining higher GDP value. The unit that will make us to be rich- men is really hard and difficult task for us to learn and use the reasonable course to make the work with becoming

interesting place to go almost five days one week. We should learn and upgrade new knowledge and technique skill in order to make it more achievement by our endeavour and insistence. All of our behavior and judgement can make the live more beneficial and make more money with some prize sometimes monthly and yearly. With regards to welcoming new world of artificial intelligence machine like auto-vendors that includes the automatic composition inside its internal-structure which makes our buying behavior more preciously, quickly and conveniently like payment action by visiting one face. We should continue to search and develop many of them applied to the current leisure occasions for us to enjoy enough through buying its goods like many kinds of the cigarette & beers in visible place in hospital roadside & community. Therefore, the sell & buy actions may let us fill with enough goods with quickly transacting course than human being because we just scan its two-dimensions bar code and determine the last payment button in monitor. So many of such AI machines have to change our daily life with less complaints and precise transformation action helped by those payment machines. On the other hand, the engineer must publish his cherish paper periodically like one paper speed within one~ three months, so that there will be six~ ten papers one year that may be published & peered reviews by editors in Journal Publisher. Certainly if there will be chances the sophisticated SCI (science cited index) & EI (engineering index) journals often are published that may influenced by the peers and may be cited by them as well if the similar theme appeared in the narration of those papers. Thereby, the enough high-technological achievement could be made by our scientists for revealing the internal attribution and finding outside our vision like quantum technique, drug compositions, astronautic exploration & 3-Dimensions print too.

Keywords: *Consuming electrical amount per capita in nations, introducing International Journal of Business Research and Management, by sustainability, an innovated research.*

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the

series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principal formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich- man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept (research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~21]

2. Discussions

The GDP as an indicator may play an important role in every aspects of nation and region economic activities, so that the emphasis on it will become a necessary factor for us to evaluate continually. For example, the expenditure and incoming balance which may influence the national economic activities like visiting various regions in a country would afford a higher expense booming including the restaurant eating style & buying souvenir etc. many aspects besides the double-flight fee. Therefore, the more income will be necessary accounting for high-technique working occupation that may bring us up the enough income for us to prepare to enjoy a travel happiness. On the other hand, the industrial producing amount will enhance the working opportunities with increasing high-technique graduates and talents in others employment rate a certain degree that may raise that GDP value definitely. [22, 23]

2.1 Consuming electrical amount per capita in nations

The consuming electrical amount per capita analysis might exhibit 3°~20° per day by China~ France correspondingly in 2000 according to the Figure 1 to realize the France forwards electric momentum. Additionally, the Britain would exhibit 17% following France occupied its second upwards developed strength.

Figure 1 Generating electricity amount per capita analysis. [1]

The consuming electrical amount per capita y-y value analysis might exhibit 8%~1% by China~ France correspondingly in 2000 according to the Figure 2 to realize the China absolutely forwards electric momentum.

Figure 2 Generating electricity amount per capita & day y-y analysis. [1]

The consuming electrical amount per capita y-y value analysis might exhibit 6.6%~2.2% by China~ France correspondingly in 1995 according to the Figure 3 to realize the China most forwards electric momentum.

Figure 3 Generating electricity amount per capita & day y-y analysis I. [1]

The consuming electrical amount per capita y-y value analysis might exhibit 3.7%~4.7% by France~ USA correspondingly in 2006 according to the Figure 4 to realize the Korea (Rep) most forwards electric momentum with 7% developed step.

Figure 4 High-technique exportation amount analysis I. [1]

2.2 International Journal of Business Research and Management

It has the impact factor with 3.2. As for the Dr & honorable professor, greetings from International Journal of Business Research and Management. We extend a warm invitation to you to contribute an unpublished manuscript for publication in our upcoming issue. We are delighted to update you that IJBRM is planning to release Volume 05 Issue 1 by the end of this month. We can accept Research article/Review/Case Report/ Events/Pilot study or any type of article. We would greatly appreciate it if you could submit your manuscript by July 30th, 2026. If your manuscript is prepared and ready for submission, please submit it via our website. Please note that If you want to become a member of the Editorial Board, a minimum requirement of either a Ph.D. or M.D. is necessary. Your affirmative response to our invitation would be highly valued. We eagerly anticipate your submission. The indexing platforms: ICI, Google Scholar, Cross Ref, DRJI, Publons, Cite Factor, ARI, ICMJE, Scilit, ISI, SIS, World Cat, and PubMed. [2] Therefore, we are delighted to invite you to submit your cherish one to us for the sake of commonly beneficial, we are to publishate your paper with rapidness after it passed the peer reviews.

In the sum, the advanced technique would be affecting our life every minute that may transform into our neighborhood styles from the daily expense to the family convenience in each aspect of living conditions with gaining sophisticated artificial intelligence machine and robot exhibition in public live. So that the many innovation engineers and fixed worker might be requested according to the resent technique requesting situation whose role may bring up daily checking the machine status to judge the wrong and

accident happening with prediction and changing parts in there. So many machines and robots will create more working opportunities than ever due to its advanced technique combiners that must be controlled by our engineers from studied expertise and trained one who can fix the detailing matters with proficient specialty from the maker and university. Therefore, the more advanced machine needs more practical experience and knowledge by our experiencing human, which may become our human being to be processing one task. Let all of our engineers and scholars together to proceed one series of burdening for the sake of completing the some heavy and moderate issues met by us.

3. Conclusions

The GDP (gross domestic product) is to be enhanced by us due to promoting its usefulness in our many aspects like expenditure incoming and leisure entertainment depended on our individual interesting that may increase our happiness and healthy curing & caring bad status like in hospital if we get catch cold etc. Therefore, we need to earn money from our working occupation continuously like company school & investment where the salary per month is obtained by us so as to maintain our daily and heavily expense. We should accept the entertainment influence to our mood control with calming down so we often go to restaurant and hotel to spend leisure time to our bodies due to its recovering our body & heart even the spiritual health. Therefore, we need more money to live advanced one place to pass our leisure time with clean room and good cuisine besides retaining good sleep after watching fashion clothes too. The expenditure may bring up new tendency that helps us to fill up the normal and positive mood to work then due to obtaining higher GDP value. The unit that will make us to be rich-men is really hard and difficult task for us to learn and use the reasonable course to make the work with becoming interesting place to go almost five days one week. We should learn and upgrade new knowledge and technique skill in order to make it more achievement by our endeavour and insistence. All of our behavior and judgement can make the live more beneficial and make more money with some prize sometimes monthly and yearly. With regards to welcoming new world of artificial intelligence machine like auto-vendors that includes the automatic composition inside its internal-structure which makes our buying behavior more precious, quickly and conveniently like payment action by visiting one face. We should continue to search and develop many of them applied to the current leisure occasions for us to enjoy enough

through buying its goods like many kinds of the cigarette & beers in visible place in hospital roadside & community. Therefore, the sell & buy actions may let us fill with enough goods with quickly transacting course than human being because we just scan its two-dimensions bar code and determine the last payment button in monitor. So many of such AI machines have to change our daily life with less complaints and precise transformation action helped by those payment machines. On the other hand, the engineer must publish his cherish paper periodically like one paper speed within one~ three months, so that there will be six~ ten papers one year that may be published & peer reviewed by editors in Journal Publisher. Certainly if there will be chances the sophisticated SCI (science cited index) & EI (engineering index) journals often are published that may be influenced by the peers and may be cited by them as well if the similar theme appeared in the narration of those papers. Thereby, the enough high-technological achievement could be made by our scientists for revealing the internal attribution and finding outside our vision like quantum technique, drug compositions, astronautic exploration & 3-Dimensions print too.

Ethic Declarations

The authors declared that there were not conflicts of interest.

Funding

This paper was supported by the Korean Science & Engineering Fund (KSEF) at the granted No 96-0300-11-01-03, under the Specific Basis Research Program.
