ABSTRACT: The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching for object defects and inner stress & temperature etc. many physical and chemistry aspects. Therein, many relational information can be acquired by our scientists and fellows for them to continuously find and seek the principal result on behalf of complicated exploration about

the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows' research aim and direction, thereby the subsequent capital support by government institutions, even institutes, and making house and devices etc. a series of preferential policies. More products and equipment made from makers will enhance our high-technique skill and equipment capacity to satisfy the requests coming from society and foreign demands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and that old low energy kinetic will collapse gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination &high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV(battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be requested through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making. So the society will continue to develop for us to be employed by those makers and increase the work-opportunity from college and university exhibited their expertise advantageous direction and theme for the sake of improving factory new-quality-productivity with those new and tip subject like some interdisciplinary departments between physics and materials, physics and chemistry, chemistry and physics, physics &administration, automation &physics, electronics &electricity, electronics &physics, electricity &physics etc..those new interdisciplinary departments will occupy the new subjects so as to enhance ours fringe-regional development and cross-disciplinary one trial and development.

Keywords: *Progressing high-technique product &GDP systems, by sustainability, an innovated searching.*

1.INTRODUCTION

The potential talents need to be emphasized and trained in a periodical education experience so as to raise the competition capacity each other that will take up the

usefulness methods to be born constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principal formula will indicate that first one factor to determine the predicting performance result and longevity. So, we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceeded by a similar method with experiment and judgment capacity. The first experiment will be done from several thousand stocks in exchange center using portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and most important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nation's industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. The more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up with the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept (research & development department) and laboratory scope that is to become our diligent destination

as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~22]

2. Discussions

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security & reliable one. Therefore, don't stop to provide innovation product with easy operations to proceed normally and refuse its advancement feature because smart products are entering our real world definitely and absolutely. Only if we continue to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed with his search to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during a certain time's innovation research. [23~28]

2.1 Latest nature Index ranking top universities in 2026

Up to March 31, 2026, on April 1, 2025, the Latest Nature Index ranking top universities would be shown top eleven one as Figure 1. The 1,655~3,279 papers were published by Sichuan University and Zhejiang University correspondingly to indicate the Zhejiang University according to the contribution rate. Meanwhile, Harvard University & Tsinghua University dominated the second & third occupation with 4,084~3,971 respectively. Shanghai Jiaotong University and University of Science & Technology of China occupied the fourth and fifth one with 3,275 and 3,574 respectively. In contrast, the University of Chinese Academy of Science had the mostly published papers value occupied seventh position with 5,150 paper numbers.

Figure 1 Latest nature Index ranking top eleven universities in 2026 [1]

Furthermore, the Latest Nature Index ranking top twelve twenty-two universities would be shown as Figure 2. The 1,139~1,558 papers were published by MIT and Huazhong University of Science & Technology correspondingly to indicate the Huazhong University of science & Technology more contribution rate. Meanwhile, MIT & Stanford University had the mostly published papers value occupied seventh position with 2,348 & 2,274 paper numbers dominated the 17th & 14th one accordingly.

Figure 2 Latest nature Index ranking top twelve twenty-two universities in 2026 [2]

2.2 Three provinces GDP in H1 2026

The Three provinces GDP in H1 2026 status analysis might show 66~575 billion dollars by Kunming Shijiazhuang cities correspondingly in 2024 according to Figure 1 exhibited

Shijiazhuang one stronger economic trajectory. Meantime, the y-y value would indicate 2.5%~5% by them accordingly to manifest the Shijiazhuang upwards developed pace. In contrast, the Shenyang city maintained the mediate occupation with 436 billion dollars and the lowest speed with 2% there.

Figure 1 Three provinces GDP in H1 2026 status. [1]

2.3 China & Europe GDP analysis

The China & Europe GDP analysis might show 19~3.8 trillion dollars by China~Britain correspondingly in 2024 according to Figure 2 exhibited China strong economic trajectory. Meantime, the y-y value would indicate 6.6%~7% by them accordingly to manifest the Britain recording the first occupation exceeding China whilst the Germany maintained the lowest one with 4.6% pace.

Figure 2 China & Europe GDP analysis. [2]

The China &Europe GDP analysis might show 1~1.8 trillion dollars by Swiss~Espain correspondingly in 2024 according to Figure 3 exhibited Espain stronger economic trajectory. Meantime, the y-y value would indicate about 7% by them accordingly to manifest them the mediate developed pace.

Figure 3 China & Europe GDP analysis I. [2]

Furthermore, the China & Europe GDP analysis might show 2.3~1 trillion dollars by Russia~Poland correspondingly in 2024 according to Figure 4 exhibited France strongest economic trajectory. Meantime, the y-y value would indicate about 9%~12% by them accordingly to manifest the Poland the most forwards developed pace exceeded the Russia whilst the France & Italy maintained the lowest y-y value with 3.9% & 4.9% accordingly.

Figure 4 China & Europe GDP analysis II. [2]

In short, the society will continue to develop for us to be employed by those makers and increase the work-opportunity from college and university exhibited their expertise

advantageous direction and theme for the sake of improving factory new-quality-productivity equipment with those new and tip subject like some interdisciplinary departments between physics and materials, physics and chemistry, chemistry and physics, physics & administration, automation & physics, electronics & electricity, electronics & physics, electricity & physics etc.. Those new interdisciplinary departments will occupy the new subjects so as to enhance our fringe-regional research & development and cross-disciplinary one searching and updating. Therefore, innovation research around multidisciplinary department base & application would emerge continuously by the expert & scholars in university and makers for the sake of proceeding subsequent new productivity item that will provide sharp and tip technology capabilities. Overall, the high-end equipment making capacity might bring up new quality productivity erection in light of building more those devices in the remote place, sand dune and seacoast etc. leisure & broad ones.

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, makers & universities. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching for object defects and inner stress & temperature etc. many physical and chemistry aspects. Therein, many relational information can be acquired by our scientists and fellows for them to continuously find and seek the principal result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institutions and institutes and making house and devices etc. a series of preferential policies. The more product and equipment made by makers will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed urgently, and that old low energy kinetic

will collapse gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flowline and some heat-supplying factories. Thereby, the more searching for those transforming courses and endeavors would be requested through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional- equipment making.
