ABSTRACT: The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many

relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital is supported by government institution and institute and including making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the requested coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting into other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-function-equipment making.

Keywords: *Progressing high-technique product & GDP systems, by sustainability, an innovated searching, five permanent members hydraulic generation analysis.*

1. Introduction

The foreign and domestic trade business would manifest the advanced aspect recent year that has an important role on transiting goods in one place to others with regards to developed increasingly one region and nation earning much more money from the others and pushed ones from out-resource and nations as to essential items importantly and rarely. So that the corresponding and consistent produce and equipment should become mutually exportation and importation relationships on how to increase the GDP value with many kinds of products produced by us and enjoy the rarely owning ones abroad. Both of exportation and importation will dominate an important occupation because win-win

strategic planning and tactic methods might be proposed by our factories and governmental policies for our makers and trade relative research department to proceed continually. Moreover, the enhanced raising rate for trade relations must attain a certain one for the sake of increasing the occupation in one region and one nation which may cause the various businesses actively developed and activate local economic behavior so as to transform the various goods among them contributed the local economy prosperity and perspective eventually.

The high-Technique products need to be continually promoted with the maker activities innovatively and launch producing due to declining original cost per product. That would include in many kinds of ones for us to exploring constantly on how to make more advance high-technique products involving primarily battery-electric-vehicle that may promote one entire industrial chain in secondary one to approach the tertiary field largely for them in details. There are so many parts for high-technique complete goods worked in up-stream and down-stream enterprises that may employ more people and special in newly out-coming graduates from colleges who may burden a drill in training & exercise course and transforming to various relative departments as well. Therefore, only those passing training teaching and active ones may insist in the many years working experience not faulted in the mid-route failure. We should win the strict course inspection and education for them constantly proceed their more fitting work to choose and do maybe.

At last the vehicle and motor as one industrial business should adopted continually to explore and search for the new ones securely and zero accidentally. The rechargeable battery for vehicle needs to be searched for new and innovative one with various compositions like expanded graphene etc ones applied to many dynamic supports. All those may influence on the industrial level strength for our engineer and fellows to chase and transform into the usefulness places. Thereby, the more focus on those new reformation in entire industries chains will be processing as soon as possible. [1~25]

2.Discussions

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the

essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security & reliable one. Therefore, don't stop to provide innovation product with the easy operation to proceed normally and refuse its advancement feature because the smart product is entering our real world definitely and absolutely. Only if we continue to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. [26~33]

2.1 Five permanent members hydraulic generation analysis

The three permanent members hydraulic generation analysis might exhibit 48~35.5 billion° by France~ China accordingly in 1972 according to the Figure 1 indicated the France strong hydraulic generation level exceeding China. Meanwhile, the y-y value might attain -2%~11% by them respectively to record the China most forwards developed pace whilst the Britain remained the mediate one with 8%.

Figure 1 The five permanent members hydraulic generation analysis. [1]

Furthermore, the three permanent members hydraulic generation analysis might exhibit 68~55 billion° by France~ China accordingly in 1979 according to the Figure 2 indicated the France strong hydraulic generation level exceeding China. Meanwhile, the y-y value

might attain 7.9%~6% by them respectively to record the France most forwards developed pace whilst the Britain remained the lowest one with -2%. Moreover, the amount per capita would indicate about 83° per year in China there.

Figure 2 The five permanent members hydraulic generation analysis I. [1]

2.2 Nations exportation amount analysis in 2025

The Nations exportation amount analysis in 2025 might indicate 6~1 billion dollars by Japan~ Mexico accordingly in 1963 in light of the Figure 3 recorded Japan upwards exportation trajectory status. Meanwhile, the y-y value would show 24%~11% by them correspondingly expressed the Japan highest developed pace. On the contrary, the Italy remained the secondly forwards developed step with 19% whilst the China remained the thirdly mediate step with 16% there.

Figure 3 Nations exportation amount analysis in 2025. [2]

The Nations exportation amount analysis in 2025 might indicate 25~6 billion dollars by USA~ Holland accordingly in 1963 in light of the Figure 4 recorded USA upwards exportation trajectory status. Meanwhile, the y-y value would show 16%~18% by them correspondingly expressed their highly developed pace. On the contrary, the Germany remained the secondly forwards developed step with 16% whilst the France remained the thirdly mediate step with 16% as well there.

Figure 4 Nations exportation amount analysis in 2025. [2]

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object default and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government constitution even institution by institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request

coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable one at all for us to share in the views of the clean atmosphere with the BEV(battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making.

Funding

This paper was supported by Korean Science & Engineering Fund (KSEF) at the granted number 96-0300-11-01-03, under Specific Basis Research Program.

Ethic Declarations

The authors declared that there were not conflicts of interest.
