ABSTRACT: The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientists and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the

subsequent capital support by government institution even institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making. So the society will continue to develop for us to be employed by those makers and increase the work-opportunity from college and university exhibited their expertise advantageous direction and theme for the sake of improving factory new-quality-productivity with those new and tip subject like some interdisciplinary departments between physics and materials, physics and chemistry, chemistry and materials, physics & administration, automation & physics, electronics & electricity, electronics & physics, electricity & physics, computer chemistry & materials etc..Those new interdisciplinary departments will occupy the new subjects so as to enhance ours fringe-regional development and cross-disciplinary one trial and development.

Keywords: *Progressing high-technique product & GDP systems, by sustainability, an innovated searching*

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity

besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done from several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI(artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept(research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards

sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~22]

2. Discussions

2.1 Passenger cars (narrow definition) retailed amount in Jan~Jul 2026 in China market

The Passenger cars(narrow definition) retailed & new energy sale amount in Jan~Jul 2026 in China analysis might show 1.5~1.45 & 6~0.95 accordingly by January~July 2026 correspondingly in 2026 according to Figure 1 exhibited in May strongest capacity trajectory to new energy vehicle. Meantime, the new energy penetrable rate value would indicate about 38%~55% by them respectively to manifest in July the most forwards developed pace exceeded in June with 63% whilst the average value maintained the y-y value with 55.5%. In addition, the four months for new energy retail like Jan, March, April & May with 6, 8.5, 8.5 & 9.5 million accordingly exceeded the average value with 5.6 million.

Figure 1 Passenger cars (narrow definition) retailed sale amount in Jan~Jul 2026 in China. [1]

2.2 Stocks price vibration in August, 2026

The Stocks price vibration in August, 2026 would show the free ones as following. On Aug 3, 2026 the <Nanxing Holds> with 002757, <Guoji Zhongzhuang> with 601399. Meantime, the <Meili Yun> with two continual plates and increasing limited, <Liou Holds> impacting increasing limited, <Xingye Tech> T+1(selling after one day buying) increasing limited, <Yuannan Zheye> with strong power increasing limited, <Hongxin

Electron> blasting in low position. [2] Moreover, the <Cuiwei Gu> with 603123 and <Taiji Shi> with 600667 exhibited the bear signal in one day and one hour accordingly. The strong ones as below might be shown the total strength. The <Xingye Tech> and <Yunnan Zheyue> completed increasing while the latter raised 46%, <Fulai Te> finished the strong raising, <Zhaoyan New Pharmacy> big raising 21% within four days, <Tiantong Holds>, <Zhongju Xin>, <Zhongwu Gaoxin>.[3] On Aug 9, 2026 the May inner <Yake Tech> with 002409 completed big raising for more than 99%; the June one <Youyan Xincai> with 600206 the same as above; <Lixin Energy> with 001258 finished big increasing twice for 129%. [4]

2.3 Nations GDP purchase power analysis

The top nations GDP purchase power analysis might exhibit 42~4.5 trillion dollars by China~Britain correspondingly according to the Figure 2 in 2025 manifested the China strongly power there exceeding USA with 31 trillion dollars. Meantime, the y-y value manifested 4.6%~1.6% by them accordingly showed China forwards developed pace. In contrast, the India maintained the first occupation with 6.8%.

Figure 2 Top nations GDP purchase power analysis. [5]

Moreover, the top nations GDP purchase power analysis might exhibit 12~2.3 trillion dollars by China~France correspondingly according to the Figure 3 in 2025 manifested the China strongly power following USA with 15 trillion dollars. Meantime, the y-y value manifested 10%~2.7% by them accordingly showed China forwards developed pace. In contrast, the India maintained the first occupation with 8%.

Figure 3 Top nations GDP purchase power analysis I. [5]

In short, the society will continue to develop for us to be employed by those makers and increase the work-opportunity from college and university exhibited their expertise advantageous direction and theme for the sake of improving factory new-quality-productivity equipment with those new and tip subject like some interdisciplinary departments between physics and materials, physics and chemistry, chemistry and physics, physics & administration, automation & physics, electronics & electricity, electronics & physics, electricity & physics etc..those new interdisciplinary departments will occupy the new subjects so as to enhance ours fringe-regional research & development and cross-disciplinary one searching and updating. Therefore, those innovation research around multidisciplinary department base & application would be emerged continuously by the expert & scholars in university and maker for the sake of proceeding subsequent new quality productivity item that will provide sharp and tip technology capabilities. Overall, the high-end equipment making capacity might bring up new quality productivity erection in light of building more those devices in the remote place, sand dune and seacoast etc. leisure & broad ones. [23~28]

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger , deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress

& temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institution and institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV(battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making.

Funding

This paper was supported by Korean Science & Engineering Fund(KSEF) at the granted number 96-0300-11-01-03, under Specific Basis Research Program.

Ethic Declarations

The authors declared that there were not conflicts of interest.
