ABSTRACT: The vehicle industry will stay an important occupation in the secondary industry that occupies more GDP (gross domestic product) allocation recently with promoting its electric vehicle into our deep level and helping us with its functional AI chip to one. Therefore, the new innovative reformation may be demanded by modern society requiring amount and quality & functions like security chips for the sake of avoiding the crash accident as soon as possible even zero accident. We should arrange more departments in university and R & D Dept in maker so as to enhance its low-cost and multi-functions device for that secure problem and price declination. On the other side, the more diversity requirement from end-customer who may ride the auto in a busy route may be demanded

ultimately. Therefore, the more researchers and study staff can be recruited and adopted for them to continually clarify and classify complicated technology into simpler ones in order to produce smarter products and equipment for our users. We could transform the key joints into the actual sample and even launch one later from university and institutes that our maker creates new one from childish stage to mature one step by step. Not only educating our new engineers and scientists but also recruiting mature experts from out-resource makers and even colleges. So that the latent and technology might create a new good circulation contributed to the maker making level & quality eventually and ultimately. We should develop not only engineers in makers internally but also cultivate the basic experiment and non-derivative one as well for progressing our making speed and amount with low-cost and high-level & high efficiency contributed to the more satisfaction from basic demands too in the ultimate view. We should maintain the continual innovation products for avoiding knock-out at all and transforming series derivative products to occupy the instructive market level and capacity. Thereby, the basic besides applied one will be proceeded simultaneously due to experiencing the double-times effort from basis to advance course definitely for owning leadership relation in product making aspect. In short, the auto business as a significant influence might wield its serious role in enhancing GDP value and all kinds of auto series with autonomous driving function for ensuring the drivers and accompany life and declining damage at all. At the end, the scientist must go on with his research constantly not giving up and publish related papers with high-quality in high-impact journal for lasting his research in defined fields after estimating theoretic & experimental courses with fully innovative method and calculation modeling capacity sustainably.

Keywords: *Progressing high-technique product & GDP systems, estimation; auto making, by sustainability, an innovated searching*

1. Introduction

The potential talents need to be emphasized and trained in a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be born constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the

performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principal formula will indicate that first one factor to determine the predicting performance result and longevity. So, we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceeded by a similar method with experiment and judgment capacity. The first experiment will be done from several thousand stocks in exchange center using portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and most important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nation's industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. The more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up with the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R & D dept (research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~26]

2. Discussions

2.1 Russian market Auto brand sale status

The Russian market Auto brand sale status analysis would exhibit 29~5.4 thousand by LADA~Changan Auto correspondingly according to the Figure 1 in July 2025 manifested the former LADA forwards economic momentum. Meantime, the y-y value might exhibit 3.5%~-30% by them accordingly manifested the Haval & Geely occupied the most upwards developed pace with 19% & 8.5% respectively while the Lada maintained the third there.

Figure 1 Russian Auto market brand sale status analysis. [1]

The Russian market Auto brand sale status analysis would exhibit 180~29 thousand by LADA~Changan Auto correspondingly according to the Figure 2 in July 2026 manifested the former LADA forwards economic momentum. Meantime, the y-y value might exhibit -1.3%~-24% by them accordingly manifested the Haval occupied the most upwards developed pace with 29.5% while the Changan maintained the backward -24% there.

Figure 2 Russian Auto market brand sale status analysis I. [1]

The Russian market Auto brand sale status analysis would exhibit 5~3 thousand by Belgee~Mazda Auto correspondingly according to the Figure 3 in July 2026 manifested the former Belgee forwards economic momentum. Meantime, the y-y value might exhibit -25%~448% by them accordingly manifested that Mazda occupied the most upwards developed pace while Toyota maintained the last amount with 36% following Mazda there.

Figure 3 Russian Auto market brand sale status analysis II. [1]

At the end, the Russian market Auto brand sale status analysis would exhibit 35~3 thousand by Belgee~Mazda Auto correspondingly according to the Figure 4 in July 2026 manifested the former Belgee forwards economic momentum. Meantime, the y-y value might exhibit 38.5%~670% by them accordingly manifested the Mazda occupied the most upwards developed pace there.

Figure 4 Russian market Auto brand sale status analysis III. [1]

Summarily, the vehicle may reflect one nation and region economic activities that also influences the GDP value in final, so that we should continuously wield our scientist and experts capabilities in all the course of auto making procedure for the sake of declining

materials and making cost and raising its multi-functional usefulness at the same time contributing to the demand from trending domestic society and auto abroad market too. Moreover, the author might proceed a course to explore the related performance for new substance and theory and publish in journals to be read by peers that is also dedicated to the similar demand from making process so as to raise its innovation function update and having more new ideas from the research course. With regards to increasing high-tech product there would be emerging more high-functional ones into society market with domestic and abroad market continuously for us to grasp the new developed market through cultivating the global new energy vehicle market sustainably by our sale teams distributed in the whole countries specially in USA and Europe ones due to their richness capital and high-developed and high-mature markets. Thereby, the more the local agents might be erected through the emphasis in those mentioned continents for the sake of expanding the new functional vehicle and other high-end device to those countries primarily.

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, makers & universities. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching for object defects and inner stress & temperature etc. many physical and chemistry aspects. Therein, many relational information can be acquired by our scientists and fellows for them to continuously find and seek the principal result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows to research aim and direction, thereby the subsequent capital support by government institutions and institutes and making house and devices etc a series of preferential policies. The more products and equipment made from makers will enhance our high-technique skill and equipment capacity to satisfy the requests coming from society and foreign demands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic

transformation needs to be transformed urgently, and that old low energy kinetic will collapse gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming courses and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional- equipment making.

Funding

This paper was supported by Korean Science & Engineering Fund (KSEF) at the granted number 96-0300-11-01-03, under Specific Basis Research Program.

Ethic Declarations

The authors declared that there were not conflicts of interest.
